

Flexible Conduit Solutions

Flexible Conduit

With a wide range of metallic and non-metallic flexible conduit systems, we combine innovative design with dedicated manufacture providing essential cable protection solutions to meet the needs of the many vigorous applications in industry. All our flexible conduit products are available in many different coil lengths to best suit your application. Remora also offers accessories and fittings to compliment our conduit ranges. If it's a contractor pack that you require, that's fine too. We offer 10 meters of conduit along with 10 straight fittings and 10 locknuts to suit. Contractor packs are available in Polypropylene, Galvanised Steel and Galvanised Steel PVC Coated.

Non-metallic Conduit: Standard weight flexible polypropylene conduit. Flexible conduit is ideal for general use where limited mechanical protection is required. The flexible body facilitates easy installation with cornering and elbow options.

Metallic Conduit: Galvanised Steel, helically wound flexible conduit with tough PVC coating. Ideal for general use where mechanical protection is required, commonly used in general factory wiring and connections to machinery.

Burial Conduit: Burial conduit is double walled in construction manufactured using high density polyethylene, creating a corrugated outer while having a smooth finish on the inside. This make-up offers flexibility and a mechanical resistance to protect cables given any irregularity with the ground.
